

SMART SOLUTIONS

CRM Pipeline Analysis

Where deals are lost — and what to do about it

Period 1: Jan — Dec 2024 | Period 2: Jan — Sep 2025 | 7,000 leads analyzed

Three findings. Three actions.

01

The pipeline has one critical failure point

79% of qualified deals die at the Propose stage — not at lead qualification. Generating more leads won't fix this.

02

Pricing & competitors kill competitive deals

Among competitive deals lost at Propose, 76% cite Pricing or Competitor Presence. Approval speed is the fixable variable.

03

A 14-day stall predicts deal death

Win rate drops from 30% to 9% once a deal exceeds 14 days at Propose. A CRM alert rule can catch this before it's too late.

FINDING 1 · FUNNEL

The pipeline breaks at Proposal stage

↓ 75.6% drop at Lead → Qualify

↓ 30.0% drop at Qualify → Develop

↓ 30.6% drop at Develop → Propose

↓ **79.0% drop at Propose → Close ← BIGGEST**

↓ 54.0% drop at Close → Won

~1%

Lead → Won Rate

99 out of 100 leads never close

💡 *Generating more leads will not fix a 79% proposal drop-off. The fix is inside the funnel, not above it.*

FINDING 2 · LOSS REASONS

Pricing kills competitive deals. Lost Contact kills the rest.

Competitive deals — Propose stage losses

Non-competitive deals — Propose stage losses

♦ Fast-track pricing

Roll out to all NAMs for competitive deals. Pilot shows 10x win rate improvement.

♦ CRM follow-up rule

Auto-task for any proposal with no activity in 7 days. Fixes Lost Contact at zero cost.

♦ Qualify before Propose

Two mandatory questions at Develop: budget confirmed? Timeline aligned? Block advancement if not.

FINDING 3 • NAM
PERFORMANCE

Raw win rate misleads — competitive-adjusted metrics tell the real story

NAM Owner	Total Leads	Raw Win Rate	Comp Win Rate	Non-Comp Win Rate	Flag
R. Alvarez	862	1.51%	6.80%	5.36%	✓ Benchmark
K. Romano	872	1.49%	5.45%	5.98%	✓ Balanced
L. Fitzgerald	857	1.28%	6.67%	4.12%	Watch non-comp
S. Patel	883	1.25%	7.95%	3.28%	⚠ Non-comp gap
J. Sullivan	871	1.03%	7.00%	2.08%	⚠ Non-comp low
T. Chen	859	0.93%	8.00%	0.00%	⚠ Verify data
M. Okafor	881	0.91%	2.63%	4.31%	⚠ Comp support
D. Singh	843	0.83%	2.80%	3.70%	⚠ Follow-up

D. Singh — Lost Contact is #1 non-comp loss reason. Coaching on follow-up cadence is the fix — this is not a market problem.

M. Okafor + D. Singh — Both below 3% on competitive deals. Priority candidates for fast-track access and competitive deal coaching.

FINDING 4 · LEAD SOURCE ROI

Inbound Web Form looks best by volume. Existing Clients are best by efficiency.

Invest more ↑

Existing Client Upsell generates \$542/lead — 56% more efficient than Inbound Web Form despite fewer total leads. Reallocate SDR time to account expansion.

Partner channel opportunity

Partner Referrals close at 5.7% opp-to-win rate — highest of any source. Structured partner incentives would compound this further.

Audit Trade Shows ↓

Trade Shows generate the lowest revenue per lead (\$185) and lowest avg deal size. Calculate true all-in event cost vs revenue return before next booking.

 **Recommendation:** reallocate 15–20% of SDR capacity from cold outreach to existing account expansion and evaluate Trade Show spend against partner channel investment as an alternative.

FINDING 5 · FAST-TRACK PILOT

Fast-track pricing approval delivered a 10× lift in competitive deal win rate

💡 **Recommendation:** roll out fast-track pricing to all 8 NAMs for any opportunity flagged as competitive in Dynamics. Define pre-approved discount bands by product line. Review quarterly.

21.4%

Fast-Track Win Rate

vs 2.8% baseline

10×

Win Rate Improvement

Fast-track vs control group

Controlled comparison confirms causation

P2 non-fast-track control group stayed at 2.1% — confirming 2025 was not simply a better sales year. The intervention caused the improvement.

FINDING 6 · EARLY WARNING

After 14 days at Proposal, win rate collapses — a CRM rule can catch this

💡 *Build a Dynamics 365 workflow: if an opportunity is at Propose stage for 14+ days with no activity, create a mandatory task for the NAM and notify their manager. Implement within 2 weeks.*

25.5

Avg Days — Lost Deals
at Propose stage

11.6

Avg Days — Won Deals
at Propose stage — 2.2× faster

Day 14 is the intervention threshold

Win rate: 28% before day 14 → 9% after. A Dynamics workflow rule at 14 days of inactivity costs nothing to build and operationalises this finding immediately.

BONUS · PRODUCT LINE
REVENUE

Digital Signage leads on revenue. Smart Lighting leads on deal size.

Total Revenue Won by Product Line (USD)

\$38,132

Smart Lighting — Avg Deal
Highest deal size

\$34,065

Digital Signage — Avg Deal
Most won deals (23)

\$33,082

Smart Mobility — Avg Deal
Lowest total revenue

💡 Smart Lighting has the highest avg deal size (\$38K) but only 12 won deals. It may be under-resourced relative to its revenue potential — worth a targeted push with experienced NAMs.

Three actions. Different timelines. One goal.

IMPLEMENT NOW (0–2 weeks)

CRM 14-Day Alert Rule

- Dynamics 365 workflow: 14 days inactivity at Propose → NAM task + manager alert
- Zero cost, no approvals needed, fully within ops team control
- Estimated impact: recover ~16% of deals currently lost to follow-up failure

THIS QUARTER (4–8 weeks)

Fast-Track Pricing Rollout

- Extend pilot to all 8 NAMs for competitive-flagged opportunities
- Pre-approve discount bands by product line (eliminate case-by-case escalation)
- Pilot data: competitive win rate 2.8% → 21.4% (+10× improvement)

NEXT QUARTER (8–12 weeks)

Develop-Stage Qualification Gates

- Two mandatory questions before any deal advances to Propose
- Q1: Is the economic buyer aligned and budget confirmed?
- Q2: Does client timeline match our delivery capacity?

Expected combined outcome: lead-to-won rate from ~1% toward 3–4% within 12 months
